-

Issues Fixed in This Release

FinalCode Client

- **Issue:** Encrypted files could not be printed when using certain printer drivers.
Fix: Encrypted files can now be printed with the affected printer drivers.

FinalCode Server

- **Issue:** User registration failed in FinalCode Client when organizational integration was enabled with Microsoft Entra ID integration.

Fix: User registration can now be performed in FinalCode Client even when organizational integration is enabled with Microsoft Entra ID integration.

- **Issue:** Two license overage emails were sent upon AD synchronization completion.

Fix: Only one license overage email is sent upon AD synchronization completion.

- **Issue:** The “Offline Function Target” menu was not displayed when only the “Offline Function Target” permission was granted at the system permission level for user types.

Fix: The “Offline Function Target” menu is now displayed when only the “Offline Function Target” permission is granted at the system permission level for user types.

FinalCode BrowserView

- **Issue:** An error was displayed when downloading files on iPhone and iPad.

Fix: No error is displayed when downloading files on iPhone and iPad.
